

METHODS, APPARATUSES AND SYSTEMS FACILITATING
DEPLOYMENT, SUPPORT AND CONFIGURATION OF NETWORK ROUTING POLICIES

Abstract of the Disclosure

5 Methods, apparatuses and systems relating to the control and application of policies
for routing data over a computer network, such as the Internet. Some implementations of
the invention facilitate the configuration, deployment and/or maintenance of network
routing policies. Some implementations of the invention are particularly useful for
controlling the routing of data among autonomous systems or organizations. Certain
10 implementations allow for dynamic modification of routing policy based on such factors as
current Internet performance, load sharing, user-defined parameters, and time of day.
